

Here are the activity details for **Self-Study Discussion 1.3: AI Software Development Plan [30 minutes]** from the open page:

Learning Outcome Addressed

- Evaluate the cost metrics and contingency planning of an AI software development plan.

(Note: This is a self-study discussion and does not count toward the completion of the program.)

Introduction

For this activity, you will complete the cost analysis for a software development plan. Assume you are the vice president of research and development. You receive a proposal along with an integration cost evaluation for implementing NLP technology in the virtual assistant device your organization is designing.

After reviewing the proposal, you notice that the cost analysis is missing. Complete the cost analysis so that you can evaluate whether the plan is feasible or exceeds your budget of \$500,000.

Tasks

1. **Review Documents:** Begin by downloading and carefully reviewing the following documents:
 - [NLP Integration Case Study](#)
 - [NLP Estimate Sheet](#)
 2. **Analyze Metrics:** Analyze the estimated cost metrics and contingency planning analyses.
 3. **Create Discussion Post:** Answer the following questions in a discussion post:
 - Will the costs for integrating your virtual assistant device with an NLP align with the development costs itemized in the spreadsheet?
 - In which areas can you reduce your development costs?
 - In which areas will your development costs exceed the estimates presented in the spreadsheet?
 - Does the spreadsheet account for the costs of your data needs?
 - What is your contingency plan if you exceed your resources or allotted project development time?
 - Is this plan worth funding? Why or why not?

(If you need help addressing a question, research and evaluate the costs and challenges of other AI development projects.)
 4. **Compare & Peer Interact:**
 - After completing the activity, check the [possible solution](#) for comparison.
 - Read the statements posted by your peers and respond with thoughtful comments and questions.
-

Submission Instructions

- **Suggested Word Count:** 150–200 words
- **Average Completion Time:** 30 minutes
