

Dr. Amanda's Jupyter Notebook Optional Exercise's Quick Reference Guide

Getting Started with Optional Exercises in Jupyter Notebooks via EMCode

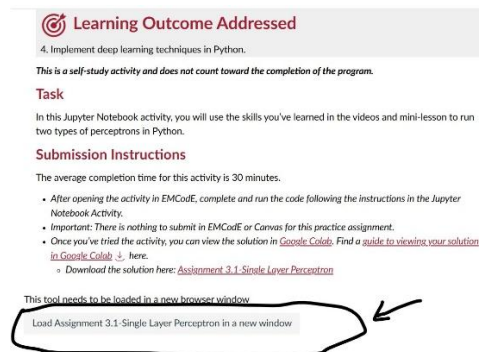

As part of this course, **optional coding exercises** are available to help you understand how the code works and dive a bit deeper into technical concepts without needing to write or edit much yourself. These are hosted in **Jupyter Notebooks** on the **EMCode platform**.

Follow the steps below to explore, run, and learn from the exercises. *(Screenshots will be placed next to each step for visual guidance.)*

Step-by-Step Instructions

1. Access the Notebook via Canvas

- Head over to your **Canvas course page** and the exercise you would to try out.
- Click the link labeled for the **Jupyter Notebook exercise**.

2. Open in EMCode

- After clicking the link, you'll be taken to the **EMCode platform**.

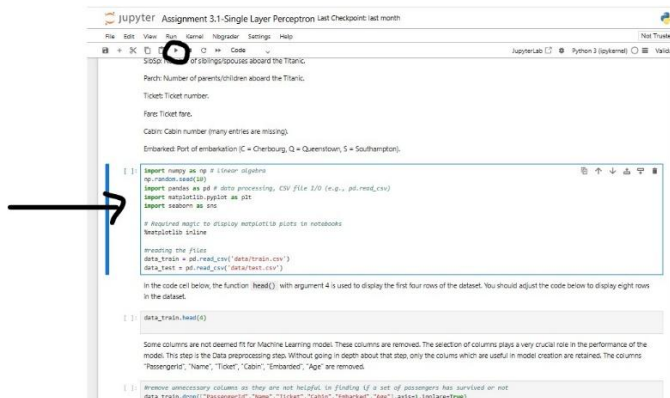

- Select the **notebook you want to explore**.

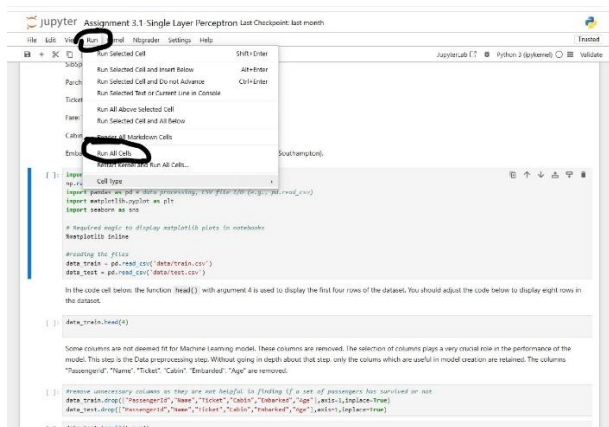

3. Run the Notebook

You have two options for running the notebook:

- **Option 1:** Run each cell manually by clicking into the cell and then clicking the **Play button** at the top of the notebook.

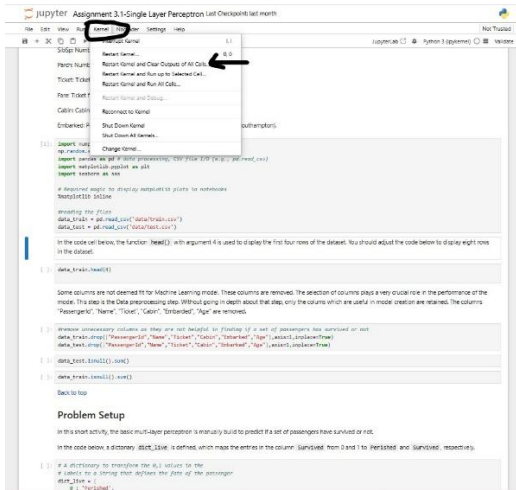

- **Option 2:** Go to the **"Run" tab** and choose **"Run All Cells"** to execute the entire notebook in one go.

4. Restart if Something Breaks

If the notebook stops working or feels out of sync:

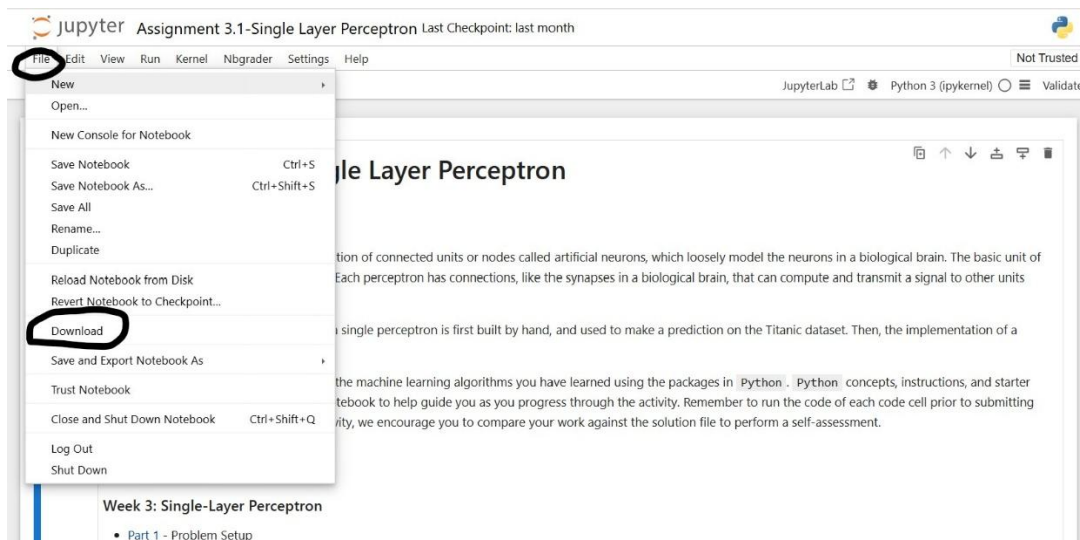

- Go to the **"Kernel"** menu.
- Choose **"Restart & Clear Output of All Cells"** to start fresh.

5. Download the Notebook for Offline Use or Future Upload

If you'd like to save a copy of the notebook to your computer:

- Go to the top menu in your notebook and click **File**.
- From the dropdown, select **Download**.
- The notebook file (with a **.ipynb** extension) will be saved directly to your browser's default download folder.
- You can later re-upload this file to Jupyter, Google Colab, EMCode, or another compatible platform for continued use.

6. In Case of Major Errors

If you've edited the code and it breaks the notebook:

- First, **try closing the browser tab** you are working from and **reopening the original Canvas link**. This often reloads a clean version.
- If that doesn't work, **submit a technical support ticket** to request a **new assignment copy** or a fresh version of the notebook.

Happy Coding!

Remember, these exercises are for learning and exploring. You're not expected to modify much code if any at all; just see how it runs and learn from the output!
